WatchGuard®

AUTHPOINT

An in-depth look into AuthPoint, a secure Multi-Factor Authentication (MFA) service offered by PCA's trusted partner, WatchGuard Technologies.

As our world becomes increasingly connected, the number of cyber threats are at an all time high. How is your business prepared? With PCA, you can gain insight and access to leading technology tools to help keep you protected.

One of the best (and easiest) ways to start protecting your business is by enabling Multi-Factor Authentication (MFA). It will securely protect identities, assets, accounts, and information. Let your team work more confidently and be more cost-effective with this multi-layered security approach.

TOP THREE BENEFITS:

MOBILE FOCUSED

Simply use your mobile device to receive a code or push notification so you can instantly access applications.

CLOUD BASED

View AuthPoint reports and alerts, configure services, and manage your account through the reliable Cloud.

ENHANCED SECURITY

Take away the risks of just using a password, choose from a variety of security needs, and take control of data.

WHY USE MFA?

Additional Security Layer
Since Multi-Factor Authentication requires the use of a mobile device, you stay extra connected and secure.

Simple Implementation
Multi-Factor Authentication can be up and running in minutes. It's easy to implement and easy to use!

Remote Access
This solution is proven to support the hybrid work model. You can stay secure no matter where you work.

99%

Did you know? Multi-Factor Authentication (MFA) stops over 99% of hackers!
